

Package: ec50estimator (via r-universe)

August 28, 2024

Type Package

Title An Automated Way to Estimate EC50 for Stratified Datasets

Version 0.2.0

Date 2022-03-03

Maintainer Kaique dos S. Alves <kaiquedsalves@gmail.com>

Description An implementation for estimating Effective control to 50% of growth inhibition (EC50) for multi isolates and stratified datasets. It implements functions from the drc package in a way that is displayed a tidy data.frame as output. Info about the drc package is available in Ritz C, Baty F, Streibig JC, Gerhard D (2015) <[doi:10.1371/journal.pone.0146021](https://doi.org/10.1371/journal.pone.0146021)>.

`ec50_multimodel` *Estimate Effective dose (EC50) for multi isolate data set using one or more models*

Description

Estimate Effective dose (EC50) for multi isolate stratified data set using one or more models.

Usage

```
ec50_multimodel(formula, data, EC_lvl = 50,  
isolate_col, strata_col= NULL,  
fct, interval = c("none", "delta", "fls", "tfls"),  
type = c("relative", "absolute"))
```

Arguments

| | |
|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| formula | An object of class " formula . (e.g. <code>growth ~ dose</code>) |
| data | A <code>data.frame</code> in which the dose-response data is in |
| EC_lvl | Define the EC level. Default is 50 |
| isolate_col | indicate the isolate column. Indicate the name inside "" . (e.g. "isolates") |
| strata_col | indicate the strata columns. If there are more than one columns, indicate as a vector (e.g. <code>c("region", "field")</code>) |
| fct | A list specifying the non-linear models to be fitted. Please, inform the model functions with the <code>::</code> operator to inform the <code>drc</code> package (e.g. <code>list(drc::LL.4(), drc::LL.3())</code>). For more info, see " drc::drm ". |
| interval | A character string specifying the type of confidence intervals to be supplied. For more information see " ED " |
| type | Whether the specified response levels are absolute or relative (default) |

Value

A dataframe containing EC estimates and statistics for model selection for each model used. For more info, see "[drc::ED](#)".

Examples

```
fct = list(drc::LL.5(), drc::W2.3(), drc::LL2.3()))
```

estimate_EC50 Estimate Effective dose (EC50) for multi isolate data set

Description

Estimate Effective dose (EC50) for multi isolate stratified data set.

Usage

```
estimate_EC50(formula, data, EC_lvl = 50, isolate_col,  
strata_col = NULL,  
fct,interval = c("none", "delta", "fls", "tfls"))
```

Arguments

| | |
|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| formula | An object of class " formula . (e.g. growth ~ dose") |
| data | A <code>data.frame</code> in which the dose-response data is in |
| EC_lvl | Define the EC level. Default is 50 |
| isolate_col | indicate the isolate column. Indicate the name inside "". (e.g. "isolates") |
| strata_col | indicate the strata columns. If there are more than one columns, indicate as a vector (e.g. <code>c("region", "field")</code>) |
| fct | A list with three or more elements specifying the non-linear function. Please, inform the model function with the <code>::</code> operator to inform the <code>drc</code> package (e.g. <code>drc::LL.4()</code>). For more info, see " drm ". |
| interval | A character string specifying the type of confidence intervals to be supplied. For more information see " ED " |

Examples

| | |
|---------------|------------------------------|
| multi_isolate | <i>Multi isolate dataset</i> |
|---------------|------------------------------|

Description

Dataset containing simulated data of mycelial growth under increasing fungicide doses for 50 fungal isolates, two types of field (conventional and organic), and two different fungicides.

Usage

```
data("multi_isolate")
```

Format

A data frame with 3500 observations on the following 5 variables.

```
isolate  a numeric vector  
field    a factor with levels Conventional Organic  
fungicida a factor with levels Fungicide A Fungicide B  
dose    a numeric vector  
growth   a numeric vector
```

Examples

```
data(multi_isolate)  
## maybe str(multi_isolate) ; plot(multi_isolate) ...
```
